</> Selected Projects

Each project listed was crafted solely by myself and from scratch. No AI tools were used, except for documentation purposes.

RISC-V Out-of-Order Execution CPU | CPU, FPGA, Verilog, RISC-V [GitHub]

Designed an FPGA circuit of a RISC-V (RV32I instruction set) out-of-order execution CPU using Tomasulo algorithm, written in Verilog, tested on AX7035 board.

Mx Compiler | Compiler, LLVM IR, RISC-V, Java [GitHub]

Engineered a compiler that compiles a C-and-Java-like language Mx* to LLVM Intermediate Representation and RISC-V assembly (RV32M instruction set), written in Java. Its performance is comparable to Clang (with mem2reg and regalloc). Implemented Mem2Reg, and the registers are allocated using the Linear Scanning Algorithm.
